

A Common Guide to Electronystagmography in Georgia

Overview

The second edition of Electronystagmography and Videonystagmography (ENG/VNG) serves as a practical guide for conducting and interpreting ENG/VNG examinations, covering normal and impaired vestibular system function, central nervous system compensation, and ENG/VNG subtests. It also checks the muscles that control eye movements. ENG checks how well the eyes, inner ears, and brain help you keep your balance and position (such as when you change from lying down. Electronystagmography (ENG or electrooculography) is used to evaluate people with vertigo (a false sense of spinning or motion that can cause dizziness) and certain other disorders that affect hearing and vision. What is. ENG is a series of sensory tests for your eyes and ears. Your doctor puts electrodes above and below your eyes and measures your reactions to light, motion, depth perception, and the effect of fluids in your ear canals.

A Common Guide to Electronystagmography in Georgia

Electronystagmography (ENG) may be done in a hospital or in a doctor's office by a doctor or hearing specialist (audiologist). Before the test begins, your eyes and ears will be checked. Any earwax in ...

Electronystagmography, or ENG, is a series of tests that can help your doctor figure out the causes of your vertigo. WebMD explains what to expect from an ENG procedure.
