

Advantages of Dual-Rate Optical Modules

Overview

Consumes less power compared to deploying multiple single-rate modules. Ideal for hybrid networks supporting IoT, 5G, and legacy devices simultaneously. By choosing dual-rate transceivers, you gain a solution that combines flexibility, performance, and reliability. Upgrade Your Network with LINK-PP! Eliminates the need to purchase separate transceivers for different speeds, reducing inventory costs. Facilitates smooth transitions to higher speeds without replacing existing. Continuous bandwidth demands are leading networks to upgrade their infrastructure more frequently than ever before. Enterprise data centers and campus networks rarely operate in a perfectly uniform environment. This article will delve into a solution that not only meets the needs of. With data center traffic growing exponentially, driven by virtualization and the demand for ever-lower latencies, the need to upgrade network infrastructure without replacing existing fiber is a top priority. The QSFP-40/100-SRBD module is positioned as the ideal solution to this challenge.
