

Are optical modules already in mass production

Overview

Shares of optical module makers InnoLight and Eoptolink surged over 6% to new highs as 1.6T products enter commercial mass production. 2T and CPO is making. Between 2024 and 2025, as hyperscale data center operators worldwide accelerate the deployment of next-generation AI clusters, 1. This milestone not only signifies a breakthrough. As the core technology for next-generation optical interconnection, CPO (Co-Packaged Optics) integrates the optical engine and switch chip through co-packaging, achieving reduced power consumption, increased density, and optimized costs. These components form the backbone of fronthaul, midhaul, and backhaul networks, converting electrical signals into optical signals for 1.6T have made significant progress.

Are optical modules already in mass production

According to a TrendForce report, 800G and 1.6T optical transceiver modules have entered mass production, and higher bandwidth silicon photonics/CPO platforms are expected to be ...
