

# Automatic fiber optic connector insertion

## Overview

The operator preps the fiber ends, puts them into the splicer, and presses a button. This automated fusion process offers enhanced cost savings and improved. With its high degree of intelligence, the SmartDispenser<sup>®</sup> - is able to supply the precise amount of epoxy to each fiber optic connector, guaranteeing exact replication. This allows the fluid dispense tip to be guided. ficonTEC provides automated stand-alone and in-line micro-assembly and testing solutions for the photonics industry, and is continually and actively involved in several internationally-supported initiatives, internally driven research projects as well as case-studies. These solutions are realized as cutting-edge, semi- or fully-automated production systems for photonic devices, regardless of the device material and of the speci.

## Automatic fiber optic connector insertion

This guide covers the entire process, from understanding connector types and tools to mastering the critical steps of preparation, assembly, polishing, and testing. These techniques will help you achieve ...

The industry must address the manufacturing challenges that automation creates for fiber optic connectivity. We discuss solutions to these issues here.

This innovation is a critical component to allowing the assembly of LC, MT or SC fiber optic connectors to be automated, increasing production throughput while dramatically lowering the cost of typical ...

US Conec's MMC connector is a Very Small Form Factor (VSFF) multi-fiber optical connector designed for termination of single-mode and multi-mode fiber cables up to 2.5 mm (nominal) in outside diameter.

With its high degree of intelligence, the SmartDispenser<sup>®</sup> - is able to supply the precise amount of epoxy to each fiber optic connector, guaranteeing exact replication. Its unique design holds LC, MT ...

This system automatically aligns the connectors, inserts the pins, and tests their functionality, ensuring that every connector meets stringent performance standards.

In one of these studies an automated test set-up has been developed that performs automatic strip, cleave and insertion of a fiber ribbon array into its connector housing.

Single machine can be operated and installed the easiest: F series three-axis automatic dispensing manipulator can be operated in a single machine without the need of an external computer.

The compact and effective automatic dispensing robot FDR-300 is used in a mass production of fiber optic assemblies where accuracy and repeatability is a must. This coordinate robot is designed to ...

ficonTEC's solutions are realized as cutting-edge, semi- or fully-automated production systems for photonic devices, regardless of the device material and of the specific application the device is ...

## Contact Us
