

# Cable Entry and Distribution Box Measurement Rules

## Overview

Pull boxes, junction boxes, and conduit bodies must be sized to allow conductors 4 AWG and larger to be installed without damage to the conductor insulation. The NEC provides sizing requirements in 314. An incorrectly sized pull box isn't just a code violation; it represents a latent point of failure that can compromise cable integrity, inflate installation labor costs, and create long-term maintenance bottlenecks. Before diving into spreadsheets, it's essential to challenge common misconceptions. The National Electrical Code (NEC) governs electrical junction box rules. These rules define when you must install a box, how large it must be, how you must install it, and how inspectors evaluate compliance.
