

Can I access the internet by plugging a fiber optic cable into a switch

Overview

The short answer is no - RJ45 connectors are designed for electrical Ethernet signals, while fiber optics transmit light pulses through glass or plastic. However, modern networks often combine both technologies. The good news: you can bridge them easily using the right hardware, such as media. When connecting fiber optic, the first step is to check for a suitable connection in your area. Then, a fiber optic cable is installed up to the meter cupboard. In this guide, we'll explain router compatibility, setup steps and whether upgrading your router is necessary to maximize fiber speeds.
