

## Can optical cables be spliced with one thick and one thin cable

### Overview

Fusion splicing may be done one fiber at a time or a complete fiber ribbon from ribbon cable at one time. Fiber optic cables are the invisible highways of our digital world, carrying massive amounts of data at the speed of light. But what happens when you need to join two cables to extend a network or repair a break?

You can't just twist them together. This is where fiber optic cable splicing—the. The performance of a fiber optic splice is determined by a number of factors, including the quality of the fiber, the cleanliness of the splice, and the techniques used to make the splice. There are numerous use cases for fiber optic splicing.
