

Can private companies lay fiber optic cables

Overview

Answer: Yes, private companies are allowed to install fiber within the public right-of-way (ROW). While utility easements allow service providers to access certain areas for infrastructure, it's important to know that right of way is managed by a municipal agency and does not exist on privately owned property. ROW refers to the legal right to install infrastructure (like fiber optic cables, utility poles, towers, and equipment) on. SelectROW is a trusted partner for telecom site acquisition and easement services. Here's what property owners should know about easements, compensation, and your options. Cable companies can have easement rights on private property, but those rights are narrower than most people assume. However, the specifics can vary depending on local laws and regulations, easements, and the terms of any agreements you may have with. The "right of entry" (ROE) for fiber installation refers to the legal permission granted to service providers to access private or public property to install, maintain, or repair fiber optic cables and related infrastructure. Here's an overview of how it works: 1.
