

# Configuring aggregation on an H3C switch

## Overview

When you configure Layer 2 link aggregation, follow these restrictions and guidelines:

- When you assign a port to an aggregation group, the recommended configuration procedure is as follows:
- a. Use the.

## Configuring aggregation on an H3C switch

In this Lab I demonstrated how to configure Link Aggregation on HPE/H3C switches. Same way we have already configure the Ether-Channel on ...

Operation Manual - Link Aggregation H3C S7500 Series Ethernet Switches Chapter 1 Link Aggregation Configuration Note: For a static LACP aggregation group or a manual aggregation group, you are ...

This time, using the H3C S6850-56HF switch (Software Version: 7.1.070, Release 6710) as a practical test example, we will demonstrate how to configure breakoutting and aggregating for ...

In this Lab I demonstrated how to configure Link Aggregation on HPE/H3C switches. Same way we have already configure the Ether-Channel on Packet tracer.

When you create an aggregate interface, the device automatically creates an aggregation group of the same type and number as the aggregate interface. For example, when you create aggregate ...

To improve link reliability, configure the aggregate interface as an edge aggregate interface. This feature enables all member ports of the aggregation group to forward traffic.

Procedures Verifying the configuration  
 Configuration files Related documentation  
 Introduction This document provides Ethernet link aggregation configuration examples. Prerequisites  
 The ...

Therefore, when connecting your S7500E switch to a device using a different link aggregation implementation, you should try to avoid configuring an aggregation group with more than eight ports, ...

Configure link aggregation on Device A and Device B to meet the following requirements:

- VLAN 10 on Device A can communicate with VLAN 10 on Device B.
- VLAN 20 on Device A can communicate ...

To optimize traffic distribution on aggregate links, you can configure a link aggregation load sharing algorithm and an algorithm seed. You can set only the algorithm or the algorithm seed, or both.

Link Aggregation Control Protocol ( LACP ) : It is a protocol that enables simultaneous operation of multiple uplinks to provide higher bandwidth and redundant connection between two switches.
