

Custom Process for Remote Monitoring of Optical Backplane Connectors in the Gulf Region

Custom Process for Remote Monitoring of Optical Backplane Connections

The VPX Configurator will help you identify the connector content within a VPX slot, whether you are following a specific standard or building a custom solution using VPX architecture.

Our in-house technical team has decades of experience with high speed backplane design, layout, mechanical and thermal design, signal integrity, power distribution and advanced connector selection.

Our unique combination of in-depth system expertise and broad spectrum of high-performance interconnect backplane products helps meet this challenge head on with real world ...

Open.Tech specializes in providing custom backplane assemblies with a focus on high-speed, high-density components that power them. Our expertise includes the design and manufacture of critical ...

Custom and standard optical fiber delivers dimensional control and tight tolerances that are designed to withstand harsh-temperature, chemical and radiation environments.

Our experienced field (FAE) and customer engineering teams are on hand to ensure that your custom backplane system requirements are met in the most efficient manner.

In this context, this work will present and discuss how different innovative technologies and consolidated technologies applied in a novel context were exploited to demonstrate the ...

Our in-house technical team has decades of experience with high speed backplane design, layout, mechanical and thermal design, signal integrity, power distribution and advanced connector selection.

SENKO" Optical Backplane connector with AirMT™ technology offers excellent optical performance and stability. Blind mating technology connects up to 144 fibers using 24F MT ferrules.

The LightCONEX ® optical interconnect family includes plug-in and backplane module connectors that have been developed to be compliant with the forthcoming VITA 66.5 standard and in alignment with ...
