

# Distribution box design requires certification

## Overview

Distribution boxes must comply with UL 50 (enclosures) and UL 508A (industrial control panels) standards. These standards are rigorous about short-circuit current ratings (SCCR), proper wire sizing, and component compatibility. You are on your way to earning an information and communications technology (ICT) design certification that is globally recognized and highly valued in the ICT industry. The electrical enclosures industry is a critical part of the infrastructure behind encasing and shielding hazardous equipment. Design requirements for low voltage distribution boxes cover NEC, IEC, and safety standards to ensure reliable, compliant electrical installations. You must make safety your top priority when working with low voltage distribution boxes. They are designed to contain internal explosions and prevent ignition of surrounding flammable gases or dust. In this article, we will explore three key aspects:
