

European Distribution Box Planning

Overview

Positioning distribution centres within a 500 km radius of primary EU consumption corridors reduces cross-border transit variability and shortens final-mile lead times, while routing high-volume lanes through inland hubs simplifies customs throughput and lowers operating. Positioning distribution centres within a 500 km radius of primary EU consumption corridors reduces cross-border transit variability and shortens final-mile lead times, while routing high-volume lanes through inland hubs simplifies customs throughput and lowers operating. This report was prepared by DSO Entity's Task Force Ten-Year Network Development Plan (TF TYNDP), which represents a collaborative effort of approximately 25 experts from 16 European member states. The document aims to identify prevailing practices and propose initial insights into Distribution. In Europe, very large distribution centres (XXL DCs) are increasingly appearing on planning agendas due to their growing spatial footprint and environmental impacts. Energy must flow efficiently across EU countries to accelerate electrification and help lower energy prices and support affordable living for all Europeans. Annual figures from NDL/HIDC, responsible for representing and promoting the Dutch logistics industry, show

stable double-digit growth figures for foreign logistics investment projects.

European Distribution Box Planning
