

Fiber Bragg Grating Intelligent Steel Strand

Fiber Bragg Grating Intelligent Steel Strand

The application relates to the technical field of building structural members, in particular to an intelligent fiber bragg grating steel strand and a prestress structural member for a...

For the protection of a fragile optical fibre with a fibre Bragg grating (FBG) sensor, the encapsulating method of embedding the FBG sensor in a longitudinal groove set in the central wire ...

This study aims to develop a sensing-integrated finished cable by embedding fiber Bragg grating (FBG) strain sensors in a steel strand and to verify sensor survivability plus anchorage/load ...

To address issues such as the low survival rate and poor durability of existing built-in steel strand cable sensors, this study proposes a fiber Bragg grating (FBG) force-sensing element based ...

An intelligent steel stand is designed, which is set a groove on the steel stand center wire and embedded with fiber Bragg grating (FBG) sensor under the state of the center wire holding a certain ...

Fiber Bragg grating (FBG) sensors are widely used in aerospace monitoring and intelligent manufacturing due to their high sensitivity, yet their deployment relies on manual assembly, limiting ...

In this paper, a new fiber Bragg grating (FBG) strain sensor with adjustable sensitivity is invented.

In this paper, a review of FBG-based sensors for strain parameter monitoring and their application in the smart factories is presented. An overview of the historical background is followed ...

The fiber bragg grating intelligent steel strand comprises a center wire and side wires, wherein the center wire and the side wires are twisted; at least ...

Recently, the Smart Strand was developed to maximize the advantages of fiber optic sensors for measuring the cable forces in prestressed concrete structures or cable-supported ...

Recently, the Smart Strand was developed to maximize the advantages of fiber optic sensors for measuring the cable forces in prestressed ...

The fiber bragg grating intelligent steel strand comprises a center wire and side wires, wherein the center wire and the side wires are twisted; at least one groove is formed in the center ...
