

Firefighting equipment in the primary distribution box

Overview

The primary components we will examine are fire alarm systems, fire detection and notification systems, suppression agents and systems, water distribution systems, automatic sprinkler systems, standpipe and hose systems, and portable fire extinguishers. NFPA ® research shows that, on average, more than four warehouse fires occur each day in the United States, with U. These fires caused an estimated annual average of three civilian deaths, 19. Determine the components of water distribution systems. Define suppression systems, including extinguishing systems. Identify the various types of water storage devices. Identify the various types of piping materials used in water. (a) Complete but simple instructions for the operation of a fixed gas fire extinguishing system must be located in a conspicuous place at or near each pull box and stop valve control and in the space where the extinguishing agent cylinders are stored.

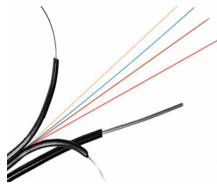

Firefighting equipment in the primary distribution box
