

How are the fiber optic switches in Wangmo

Overview

This is the most fundamental ring topology, formed by connecting three or more switches in a closed loop using fiber optic cables. These component-style fiber-optic prism optical switches utilize moving prisms between fixed collimator pairs, which allows bi-directional switch operation independent of data rate and signal format. Where switches simply block or pass optical signals on individual or multiple channels, multiplexers route multiple channels out to a single fiber optic cable. Demultiplexers route a. Westermo offer multimode and singlemode options with transmission speeds ranging from 100 Mbit/s to 10 Gbit/s. Each node is connected to two other nodes, forming a ring-like structure. This design ensures data can travel in both directions.
