The sensor features a single discrete output, either NPN or PNP, by model. The DF-G1 features increased temperature compensation compared with previous fiber optic sensors.

Follow these steps to install glass or plastic fibers. Open the dust cover. Move the fiber clamp forward to unlock it. Insert the fiber (s) into the fiber port (s) until they stop. Move the fiber clamp backward to ...

These tables demonstrate that the sensor will detect light sources typical in many industrial applications and highlights that the selection of the fiber optic cable diameter affects the limits of light detection.

NOTE: If a thin fiber with less than 2.2 mm outer diameter is used, install the fiber adapter provided with the fiber assembly to ensure a reliable fit in the fiber holder.

Positioning Installation: Ensure that the fiber optic sensor is in full contact with or close to the physical quantity being measured, and consider the characteristics of the physical quantity ...
