

# How to adjust a fiber optic signal sensor

## How to adjust a fiber optic signal sensor

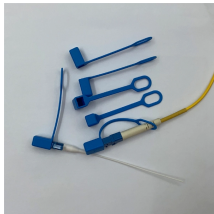

The active receiver is used to indicate sensor output state, fiber-amplifier pair, and thru-beam optical axis alignment. Cycle thru active receiver functions by pressing the ACT-R button.

This article focuses on specifying and applying fiber optic sensors as they provide advanced capabilities and configuration options, and are great for ...

How to connect the fiber cable Therefore, confirm the settings by pressing the SET key before turning the power Mount the fiber cables in the state power is not supplied. Be sure to fit the attachment to ...

This article focuses on specifying and applying fiber optic sensors as they provide advanced capabilities and configuration options, and are great for tight spots where a photo eye ...

Operating mode is where we set the sensors sensitivity we mentioned earlier. The high sensitivity setting is for extending the detection range so we can detect objects that are a little farther away.

Sensor Setting Guide available in all major Asian and European languages. An essential support tool for personnel configuring sensors in any country.

For precautions and operation details, refer to the instruction manual included with the product. \*1 This is a channel switch on 2-output types. This is not equipped with the 0-line type. \*2 Press and hold the ...

Dial the lock lever to the vertical position, at this point the optical fiber has been fastened, remove the optical fiber and dial the lock lever to the horizontal

First, put the detected object in the farthest place, LED displays the received light intensity 0, press SET key. Then move the detected object to the place close to ...

This mode can change the threshold value depending on the cycle (1 to 9,999 sec.) that is set with the variations of the incident light intensity. The tracking shift amount is the one which is set at the shift ...

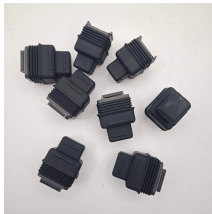

The "MODE" button on FS-V31 sensors serves various configuration purposes, such as displaying and navigating through menus to set power modes, sensitivity, timer, and detection settings.

This mode can change the threshold value depending on the cycle (1 to 9,999 sec.) that is set with the variations of the incident light intensity. The tracking shift amount is the one which is set at the shift ...

An optical fiber sensing system is basically composed of a light source, optical fiber; a sensing element or transducer and a detector (see Fig. 2.2). The principle of operation of a fiber sensor is that the ...

How to Adjust - Set up Keyence Fibre Optic Teach Sensor on JDA Filling & Capping Machines For sales inquiries or questions about our machinery please contact our office.
