

How to calculate the price of raw materials for engineering cable trays

Overview

Material type dominates wireways and cable trays price calculations. Galvanized steel remains most economical (\$3-8/ft), while aluminum costs \$8-15/ft, and fiberglass reaches \$10-20/ft. Gauge thickness (typically 12-16 AWG) affects pricing by 15-25%. Get accurate quotes for industrial electrical i

Basic cable tray systems cost \$3-15 per foot depending on type and material. Installation labor adds \$5-8 per foot to total project costs. Cable tray pricing depends on materials, coatings, size, supplier margins, and order quantity —plus hidden costs like shipping and installation. This method is useful for estimating purchase weight, landed material spending, and realistic unit economics in fabrication, machining, and production planning. With unit conversion. The selection of the method of carrying wires is based on two points: the cost of the components and the cost of work.
