

# How to change the router location for fiber optic connections

## Overview

The typical solution is install the fiber modem in the best place for the fiber, and then run a single ethernet line to your router. If it's an all-in-one box you can probably get it changed. Relocating your router and modem requires careful planning to ensure a hassle-free transition. Consider these criteria: The room should be centrally located for equal signal distribution. It should have minimal. When you subscribe to an FTTP service, a engineer installs a fiber optic cable directly to your premises, terminating at a ONT (Optical Network Termination) box near dedicated router provided by your Internet Service Provider (ISP). 30m is hardly unreasonable for ethernet, but I would buy good cable and avoid running it parallel to. The broadband provider will arrange for the wholesale provider (e. They will then feed this in to the.

## How to change the router location for fiber optic connections

You can either have your Router situated right next to the ONT, or run your own long Ethernet cable from the ONT directly to your Router elsewhere in the house.

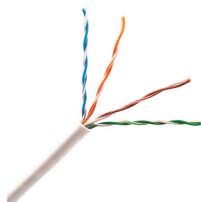

With the router moved close to the newly installed ONT, what is the easiest way to get wired ethernet to the PC in the other room without installing a long ethernet cable.

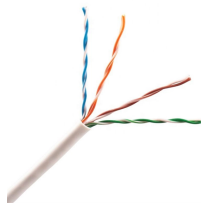

The typical solution is install the fiber modem in the best place for the fiber, and then run a single ethernet line to your router. If it's an all-in-one box you can probably get it changed.
