

How to convert fiber optic cable to Ethernet port connection

Overview

A media converter is a simple device that sits between the fiber optic cable and the Ethernet cable. (LC, SC) matches the port. Ethernet ports are designed for copper cables (like Cat5e or Cat6), which transmit data using electrical signals. In most cases, it converts Ethernet (copper) signals to fiber-optic signals (and vice versa). This allows networks to extend beyond the 100 m copper limit while gaining higher bandwidth and resistance to electromagnetic interference. This device extends network reach, improves reliability in harsh environments, and allows. Converting SFP (Small Form-factor Pluggable) to Ethernet is a common requirement in networking environments where there's a need to integrate fiber optic connections with traditional Ethernet networks. Protect your devices from lightning strikes and enjoy reliable, high-speed connectivity with the MC220L media converter.
