

# How to cover up distribution boxes and fiber optic boxes

## Overview

This guide covers how to safeguard outdoor fiber optics across underground, aerial, direct-burial, and exposed setups. They provide a secure, organized, and stable environment for the sensitive points within a fiber network—splices, connectors, and distribution points—safeguarding them from a multitude of external threats. Yet, outdoors, they face temperature swings, moisture, UV exposure, rodents, and human interference. Protecting them is essential for long-term reliability. Clearfield® CraftSmart® Fiber Protection Vaults (FPVs) meet and exceed industry standards for strength, reliability and environmental concerns. In the dynamic landscape of modern communication, Fiber Termination Boxes (FTBs) play a pivotal role in ensuring the efficiency and reliability of fiber optic networks.
