

Huawei Optical Power Meter Usage

Overview

Unplug the fiber optic connector from the optical AP, connect the optical power meter to the fiber optic connector, and measure the received optical power of the optical AP. Check and record the reading of the optical power meter. For light power measurements outside the field of. OPM-15 Series, together with evaluate fiber link transmission quality. It helps engineers verify the performance of optical fiber systems, ensuring that the signal strength meets requirements, and is an essential tool for communication network maintenance and troubleshooting. A new SC/PC single-mode patch cord not longer than 1 m is recommended.
