

Installation location of optical module for switch

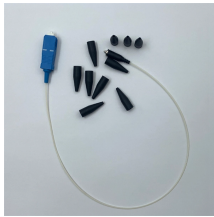

Installation location of optical module for switch

Install optical modules safely with ESD protection, proper handling, and dust control. Follow these steps to avoid damage and ensure network reliability.

Ensure that the optical module is correctly oriented and gently push it into the optical port until you hear a click. The new optical module must have the same optical parameters as the remote optical ...

Module installation is an important factor affecting the service life of switches and modules. In the installation process, be sure to follow the installation steps mentioned above and pay attention to the ...

Place the transceiver in the antistatic bag or on the antistatic mat placed on a flat, stable surface. Place the dust cover over the empty port, or install the replacement transceiver.

The switch must be fully installed in its rack, connected to a power source, and grounded. The necessary cabling for the console, management, and network connections must be available.

Insert the fiber optic cable into the SFP module. Ensure that the latch on the cable faces the top of the SFP module. Slide the cable into place until a connection is made and an audible click is heard.

This section describes how to install an optical module. The method used to install a copper transceiver module is the same, except that the copper transceiver module connects to a network cable instead ...

SFP transceivers allow for the transmission and reception of optical signals in networking devices such as switches, routers, and media converters. In this guide, we will walk you through the ...

Hold the two sides of the optical transceiver module and gently push the module into the slot. Module installation is an important factor affecting the service life of switches and modules.

Insert the optical transceiver in an external port on the switch module until it is firmly seated and the latching mechanism clicks. Transceivers are keyed to ensure correct orientation.
