

Ireland Silicon Photonics Technology SFP

Overview

This major new initiative is designed to strengthen Ireland's role in the global semiconductor industry and fulfil a key Programme for Government commitment. Ireland's new Semiconductor Strategy, Silicon Island has been officially launched by Minister for Enterprise, Tourism and Employment, Peter Burke at a special industry event. At the same time, semiconductor producers and governments are scrambling to diversify and. IPIC the Research Ireland Centre for photonics, is Ireland's centre of excellence for research, innovation and PhD training in photonics - the science and application of light - which today represents a 0.

Ireland Silicon Photonics Technology SFP

Titled “Silicon Island”, the strategy signals Ireland's intent not only to strengthen its foothold in microelectronics but to become a leading player in the ...

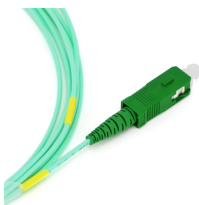

Ireland's new Semiconductor Strategy, Silicon Island has been officially launched by Minister for Enterprise, Tourism and Employment, Peter Burke at a special industry event.

Ireland has been active in the field of photonics for many years – from the development of leading edge technology, to its deployment in global markets such as ICT and Life Sciences.

This gives Ireland a platform from which to build opportunities across the semiconductor value chain, including in a wide range of ancillary industries such as MedTech, industry 4.0, and ICT (Information ...

Titled “Silicon Island”, the strategy signals Ireland's intent not only to strengthen its foothold in microelectronics but to become a leading player in the European and global chip economy.

Irish and MNCs semiconductors in Ireland are enabling a new wave of precision agriculture through advanced image and data processing, more global efficient communications ...

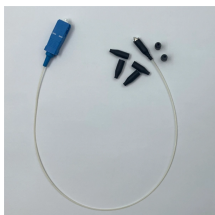

We bring together Ireland's photonics companies, technology users and stakeholders, to define a common strategy and identify and execute activities which will increase economic activity, drive job ...

We work closely with over 30 industry partners to develop their next generation products, across Ireland's high growth technology sectors such as ICT and MedTech, supporting their ...

With quantum computing breakthroughs, advanced packaging leadership, and a €43 billion EU Act in play, Ireland's microelectronics ecosystem is shaping the future of tech around the world. They...

We work closely with over 30 industry partners to develop their next generation products, across Ireland's high growth ...
