The most commonly used SFP optical modules operate at 850nm, 1310nm, 1490nm, and 1550nm. Their pull tab colors help quickly distinguish between module types and supported transmission distances. CWDM (Coarse Wavelength Division Multiplexing) modules use 18 different wavelengths between 1270nm and. Usually, a white light shining on your motherboard is a white (sometimes labeled VGA) LED indicating problems with detecting your graphics card. However, this white light could also mean that your CPU is improperly mounted, or even have bent/damaged pins (CPU pins are possible but difficult to. twork can offer large-capacity, high-rate, and LH rigid pipes. As applications and demands such as 4k video, cloud-network convergence and "East-to-West Computing Resource

Transfer" popularize and develop, the optical network is evolving into the high-quality comprehensive service network. If an optical module has been certified by Huawei, its label contains "HUAWEI", as shown in Figure 1-1.
