

## LC beam splitter 12

## LC beam splitter 12

When working with lasers, it is often necessary to split a laser beam into two or more defined partial beams. There are a variety of beam splitters for these applications, with different advantages and ...

Beamsplitter splits average polarized laser beam in two beams separated 90° from each other.

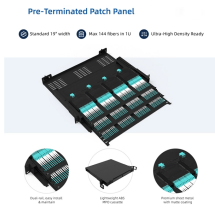

Beam-splitters are optical components used to split input light into two separate parts. Beam-splitters are common components in laser or illumination systems. Beam-splitters are also ideal for fluorescence ...

These beamsplitters consist of a pair of precision right-angle prisms carefully cemented or optically contacted (models with PC.21, PC.22, and PC.24 coating) together to minimize wavefront distortion. ...

Beamsplitters are optical components used to split input light into two separate parts. Beamsplitters are common components in laser or illumination systems. Beamsplitters are also ideal for fluorescence ...

	<p>Choose from our selection of laser beam splitters in a wide range of styles and sizes. Same and Next Day Delivery.</p>
---	---

	<p>A beam splitter or power splitter is an optical device that can split an incident light beam e.g. a laser beam into two or sometimes more beams, which may or may not have the same optical power.</p>
