

Method for converting the square to round shape of the pigtail flange

Overview

Similar to plan view triangulation, a square to round should always be started from a horizontal line, A-B. Swing the element line A-4 from point A and transfer it to the baseline A-B of the elevation view. Note: The baseline A-B may need to be extended to. The only way you can see a true length line is perpendicular to its plane, the best way to see the true lengths in a square to round fitting is to draw a top view of the fitting as we did above. You need to develop a true length bar. Editor's Note: CAD files associated with this column can be downloaded here. This advanced sheet metal fabrication technique is demonstrated using step-by-step instructions and practical tips for achieving a professional finish. Where it crosses the first arc, becomes point 4. Pick up a. FastSHAPES® is the generic name for a suite of Plate & Sheet development software programs specifically designed for heavy fabrication where the main jointing technology is welding.

It is recommended to use letters on the square end and numbers on the round. Start the pattern by drawing the True Length (TL) of line A-B on a horizontal plane, remember that this line is a true ...

Uses Triangulation development method to create patterns of conical and transition shapes (as standard). Also "SupaFastNest" & radial line development when possible.

Here we take you step by step in developing a Square to Round, just keep in mind "Practice makes perfect".

Choose a line of symmetry to place the seam so you only need to make 1 pattern. Label one half of the plan view, the round end with numbers and the square end ...

To transition a duct from square to round in four pieces in CAD modeling, the CAD jockey mimics the way the part would be fabricated—four identical corners welded into a funnel.

It is recommended to use letters on the square end and numbers on the round. Start the pattern by drawing the True Length (TL) of line A-B on a horizontal plane, ...

Print 2 copies, trim and tape together to form full template. If you need to take full scale measurements directly from your monitor, adjust the size of the diagrams on screen to match a ruler. Does not affect ...

Choose a line of symmetry to place the seam so you only need to make 1 pattern. Label one half of the plan view, the round end with numbers and the square end with letters. Next, pick up true length of ...

The process of transitioning square ductwork to round ductwork is explored in detail.

Transition Pieces are usually made to connect two different shaped objects (e.g. round pipes to square pipes) as often found in Ducting for Air Conditioning or Dust and Fume Extraction systems.

Transition Calculator is useful for Generating Flat Pattern Layout or Fabrication Layout of all types of transition shapes such as rectangular to round, square to round, round to rectangular, round to ...
