

Optical Cable Traction Construction Method

Overview

In fact, there are two methods for aerial optical cables laying: one is "fixed-pulley traction method", including "manual traction method" and "mechanical traction method"; the other is "cable tray moving and releasing method". With 20 years of experience in professional optical cable manufacturing, we have a set of mature methods and experience for optical cable construction. The shortest path is not necessarily the best. The Fiber Optic Association, Inc. Aerial installation is generally much less costly than underground construction also. Tailor every aspect of your fiber optic solutions — from cable type, connector style, and jacket material to branding. An Overview of Installation Techniques reveals a variety of methods used to install Optical Fiber Cables, each suited to different environments and requirements. This guide will explain the construction of optical fiber, highlighting how each part contributes to efficient data transmission.
