

POE Access Layer Switch

Overview

Access layer switches sit at the edge of a LAN and connect computers, printers, phones, and IoT gadgets to the wider network. It typically sits at the access layer, provides high port density, often delivers PoE, and forwards traffic. Lantronix's Power-over-Ethernet switch (PoE switch) family delivers data packets and DC power over the same copper cable, making the deployment of VoIP phones, Wi-Fi access points, security cameras, IoT device options and other systems much simpler. The PoE standard utilizes both power sourcing. Pick an access layer switch that (1) offers enough ports for every wired and PoE device you'll add over the next three years, (2) delivers the speed—1 Gbps for general traffic or 10 Gbps for heavy data—to keep users productive, and (3) includes security and management features that prevent downtime. What is a PoE switch (Power over Ethernet switch)?
