

Pulse High Beam OBD Module

Overview

Activates High current relay when High Beams are turned on, used to add large light bars and driving lights without having to install additional switches in the dash. Plugs directly into Polaris Pulse System for switch lighting and keyed on ignition. Before this change, ProMasters would burn through halogen headlight bulbs. You can use AlphaOBD to turn off high beam PWM. I live on a dark windy road and need them to come on earlier that the speed they do it is for a Skoda Superb Mki.

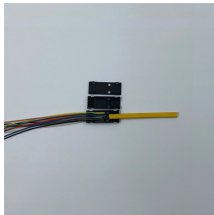

Pulse High Beam OBD Module

Made in the USA! Activates High current relay when High Beams are turned on, used to add large light bars and driving lights without having to install additional switches in the dash. Plugs directly into ...
