As a leader in AI computing, NVIDIA is actively advancing the deployment of both QSFP-DD and OSFP form factors in its optical module solutions, providing critical infrastructure support for next-generation data center networks. Ultimately, both modules meet all technical requirements (power, cooling, signal). System engineers must balance priorities of reach, thermal management, panel density, backward compatibility, power consumption, multiple sourcing, and cost when selecting optical transceivers. Pluggable I/O transceivers in standardized configurations have proven to be a cost-effective solution to. Cisco QSFP-DD and OSFP 800G ZR/ZR+ digital coherent optics modules enable 800G traffic over amplified Dense Wavelength-Division Multiplexing (DWDM) links up to 120 km for 800ZR and over 1000 km for 800G ZR+. 5% of total revenue, down from 21. 2% last quarter due to high Americas-based sales to global customers. In the design of AI computing clusters, Scale-Up and Scale-Out have different.
