

Rack network reboot

Overview

Cisco Meraki devices can be reset to factory defaults using the reset button on the device. This requires a paper clip or object with a long thin tip. Press and hold for 10-20 seconds, or until the power light goes out. The MyRackspace Portal now has a new reboot option for network devices. This reboot option gives you the control and flexibility to reboot your network device during a maintenance window that best fits your business needs. You can also use this option when your device experiences security. How can we help you today?
