Relay protection device switching

Overview

A device that functions to give a desired amount of time delay before or after any point of operation in a switching sequence or protective relay system, except as provided by device functions 48, 62, and 79.

Relay protection device switching

	The fault can be located upstream or downstream of the relay''s location, allowing appropriate protective devices to be operated inside or outside of the zone of protection.
	By coordinating with other protective devices, such as fuses, circuit breakers, or disconnect switches, protective relays ensure selective and coordinated fault clearance, optimizing the overall protection ...
