

Replacement of the ceramic core of the pigtail

Overview

Reach inside the kiln chamber and push the element through the hole as far as it will go and slide the connector over the pigtail so the end of the pigtail is in the center of the connector and crimp down hard. When you let go the connector and insulator should be pulled snug. New customer?

Butt splices provide excellent mechanical strength, consistent electrical performance, and are often the fastest installation method for most pigtail repairs when properly sealed.

This ceramic connector will withstand higher heat than the usual plastic connectors that overheat and melt due to over sized bulbs and loose connections. Ceramic can take the heat when plastic will fail.

When confronted with a wiring harness repair, we often struggle finding the correct connector and pigtail repair kits. Often a specific connector may be used on multiple applications.

Headlight Bulb Connector Pigtail for 9007/HB5 & 9004/HB1, Ceramic 3-Pin Male Plug, fits Ford F-150 92-03, Ranger 93-11, Dodge Durango 99-03, Jeep Liberty 02-07, VW Jetta 99-05

See this post for instructions on how to properly splice in a new pigtail. With a heavier gauge pigtail in place, you'll never have to deal with a melted headlight connector again.

This is a premium high temp ceramic H4 type headlight socket wired with 5.5" of high quality, US Made, 14ga wires. The ceramic socket is also covered with a protective silicone rubber boot.
