

Sc Cold joint defects

Overview

Injuries and osteoarthritis are the most common disorders associated with the SC joint. Injuries to the SC joint typically result from high-energy injuries, such as motor vehicle collisions, or contact sports like football. This guide will help you understand What does the SC joint look like?

The SC joint connects your clavicle (collarbone) to your sternum, which is the large bone down the middle of. The SC joint links the bones of the arms and shoulder to the vertical skeleton. The SCJ is generally a very stable joint due to it's very strong supporting ligaments. This may follow trauma or injury.

Sc Cold joint defects
