Setting parameters for the smart gateway of the power distribution

To access the unit for the first time, you must temporarily change your computer's network settings to match the 192.168.123. xxx subnet. To set up the unit, connect it to your computer's Ethernet port, ...

To ensure that this product maximizes the benefits to users, it is recommended that the high-power equipment be connected as smart loads (heat pumps, third-party inverter, etc.), which can be cut off ...

The following table lists the default network parameters and services for the PDU.

This parameter specifies the interval in seconds between switching on and switching off outlets when an entire PDU strip is cycled (all outlets commanded on or off).

Learn more about how to use the PDU Configuration Utility to access and configure the power distribution unit (PDU).

Enter the IP Address, Subnet Mask, and the Gateway address that the SmartZone Gateway unit will use (required). Contact your network administrator if you do not know the values that you must enter here.

The Actions Menu on the right side of the page will allow the user to Add Card, Rack Access Settings, Handle Settings, Keypad Settings, Remote Control, Beacon Settings, and Status LED Settings.
