

# The network disconnects when the fiber optic box is connected to the switch

## Overview

Restart Devices : Reboot switches, routers, or media converters to resolve temporary glitches. Check Indicator Lights : A “LOS” (Loss of Signal) LED on transceivers signals connectivity issues. Configuration errors are a hidden culprit: Despite their robustness, fiber networks can fail due to: Physical Damage : Cuts, bends, or contamination in fiber cables or connectors. This article will guide you through the process of troubleshooting fiber optic connections, with a focus on ensuring proper TX and RX alignment and how to correctly switch patch. The table describes the LED status indicators for Ethernet modules or fixed-configuration switches: Ensure that both sides have a link. A single broken wire or one shutdown port can cause the problem where one side has a link light, but the other side does not. A very common problem is that a connector is not fully engaged - often hard to notice in a crowded patch panel.
