

Unable to configure router after fiber optic installation

Overview

Restart the ONT and router to refresh connections. Ensure your ISP has activated your service and that your router's WAN port is configured correctly (DHCP or PPPoE). If problems persist, inspect for physical cable damage or request a technician visit to test the fiber line and ONT. If that does not fix the problem, then you may have to work out how to get the two routers to play nicely together. If it is anything like my ISP supplied gateway modem/router, your device will have an option to put the MR80 into its "DMZ". Here's what I'll tell them: You have no. However, setting up a fiber optic connection to your router can seem daunting if you're unfamiliar with the process. Checking the router's Internet Protocol (IP) address is the key starting point — it tells you whether the problem is with the router itself or the modem. This issue can stem from various factors including hardware, software, and configuration settings.

Unable to configure router after fiber optic installation

The router automatically changed its IP address to 10.0.0.1, as well as all the IP addresses that connect to it. This explains why I couldn't find anything on the network.

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Make sure to ...
