

Upgraded version of Canada s energy management system

Overview

Released in March 2024, the new CEC brings about a host of changes to keep up with trends in the electrical industry and to make it easier for contractors to adopt green energy initiatives. It includes loads of new definitions and rules regarding batteries, renewable energies, and. Rather than treating all electrical uses equally in a home, an energy management system allows you to prioritize some uses over others, allowing electrical panel capacity to be shared—and letting you use a smaller electrical panel to accommodate more loads. Energy management systems are evolving. The Government of Canada is taking action to build a clean, affordable and economically competitive future for all Canadians. Modernizing legislation and delivering programs to enable tenants, homeowners, building operators, manufacturers and industrial facilities to choose energy-efficient. EEM is a tailored energy management offering based on the unique business needs of your organization. It offers the following paths to help facilities save energy and achieve sustainability goals.
