

Upgraded version of Israel s smart city fiber optic distribution box

Overview

IBC Unlimited announced today (Monday) that it is expected to launch a new fiber technology called XGS-PON. The new technology will allow browsing of up to 10 gigabytes, when for comparison the currently accepted speed in the market is 1 gigabyte. The system, which was rolled out this morning (Tuesday) on the website of the Ministry of Communications, makes it possible to check, on an interactive map, as to whether a certain building has access to fiber optic infrastructure and to make an informed decision regarding upgrading your Internet. Starting at the end of the first quarter of 2023, the telecommunications companies that provide internet on IBC's fibers, such as Cellcom, HOT, Expon and 019, will be able to provide a service based on the new technology. 5 GB surfing package will be NIS 85 before VAT IBC. The Ministry of Communications is preparing for the gradual shutdown of outdated copper and cable networks, which have so far been used for telephony and television services by Bezeq and HOT, as the country moves toward full adoption of fiber-optic networks by the end of 2030. From intelligent traffic control and environmental monitoring to digital citizen services - all smart city components require. Fiber-to-the-Home (FTTH) in Israel is provided to private

consumers by several different telecom companies: Each uses slightly different infrastructure and configurations. This repository documents the technical details for each telecom. Additionally, the goal for this repo is to provide details on. The company has raised NIS 450 million from Migdal and Discount Bank to continue expanding its network.
