

# What are non-standard network cabinets

## Overview

Server cabinets are typically built with a 24-inch wide frame to fit standard 19-inch servers. 5 inches wide for switches, routers, network patch panels, and telecom equipment. ) and they are not usually as deep as server racks and cabinets. As the title states, I'm looking for ideas for a medium to compact networking cabinet with a couple shelves for a router, some 5 port switches, maybe even a synology NAS in or on top of it at some point. Basically one of those little network racks minus the rackmount brackets running down the sides. Not only a simple storage unit, a network cabinet is a key player in safeguarding and organizing critical network equipment.

## What are non-standard network cabinets

Server cabinets are typically built with a 24-inch wide frame to fit standard 19-inch servers. In contrast, network cabinets are typically built with a frame that is 30 inches or 31.5 inches wide for switches, ...
