

What s that smell inside the electrical distribution box

Overview

The breaker box is the main distribution point for all electricity entering your home, and any unusual odor suggests that a component inside is overheating. A fishy odor emanating from your electrical panel, often called a breaker box, is not a normal household smell and should be treated as an immediate emergency. Many electrical components contain heat-resistant plastic or resins that give off a fish-like odor when they break down under high heat. Not addressing them promptly can lead to electrical shocks, health hazards, or fires. When they start tripping, overheating, or making strange noises, it's more than just an inconvenience - it's your home's cry for help. In this guide, we'll walk through these. When a burning smell hits your nose—especially a smell of burning plastic or a burning wire smell—it can be a sign of heat building up where it shouldn't.

What s that smell inside the electrical distribution box
