

Where to put the Danger of Electricity sticker on the electrical box

Overview

Where should electric hazard labels be placed?

Labels should be placed directly on or near electrical panels, switchboards, machinery, disconnect points and any equipment where shock or arc flash hazards are present. According to the Electrical Safety Foundation International (ESFI), the majority of electrical fatalities occur in electrician and construction occupations, followed by installation, maintenance, and repair occupations. The private industry is responsible for the majority of these fatalities. One. The National Fire Protection Association's (NFPA) 79 standard requires enclosures that do not clearly show that they contain electrical devices to be marked with a safety sign in accordance with the ANSI Z535 standards. When each circuit is clearly marked, maintenance crews, electricians, and even first responders can quickly identify key components during an emergency. Electrical panels can be dangerous if not properly. Here are some key points to consider when using electrical hazard warning signs and labels: Types of Signs and Labels: There are several types of electrical hazard warning signs and labels that can be used, including danger signs,

warning signs, caution signs, and labels.

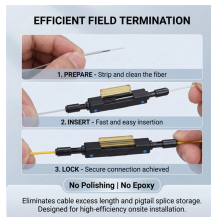

Where to put the Danger of Electricity sticker on the electrical box
