

Which equipment does the network cabinet belong to

Overview

A Network Cabinet, often interchangeably called a server rack, is a physical frame or enclosure designed to house and organize various types of network hardware and accessories. From an engineering perspective, a network cabinet is a piece of equipment used to combine installation panels, plug-ins, sub-boxes, electronic components, devices, and mechanical parts and components to form an integral installation box. It provides the perfect environment for housing and protecting network infrastructure. Not only a simple storage unit, a network cabinet is a key player in safeguarding and organizing critical network equipment. These include routers, switches, servers, patch panels, and solar batteries.

Which equipment does the network cabinet belong to
