

# Which type of floor distribution box is being referred to

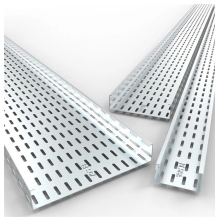

## Overview

A floor-mounted distribution box is a power control unit that is installed directly on the floor, often with a sturdy base or frame for support. It is designed to handle heavier loads and accommodate larger wiring systems compared to wall-mounted options. They come in a range of sizes and there are different boxes for different types of flooring. Whether you're powering workstations in an open-plan office, supplying machinery on a factory floor, or installing data outlets in a conference center, the correct floor box ensures safety, code compliance, and a clean finish. These boxes aren't just about convenience; they are engineered for raised access floor systems, which are widely used in offices, data centers, and other high-tech spaces. Think of them as hidden electrical heroes that deliver. Floor boxes are boxes made of steel/stainless steel and plastic, designed to be installed into raised access or screed floors.

## Which type of floor distribution box is being referred to
